

TableTrack - Enterprise Feature Directory

Complete Specification Matrix: Restaurant POS, Hotel PMS, Inventory & Integrations

1. Platform Overview

TableTrack is an all-in-one Hospitality ERP and POS SaaS solution built for modern restaurants, hotel groups, and multi-branch food chains. It integrates front-of-house QR ordering, multi-terminal POS billing, back-of-house kitchen display KOT routers, hotel PMS front-desk management, detailed stock inventory costing, double-entry accounting, and smart customer alert integrations (SMS, WhatsApp, and AI Tools).

2. Core Module & Feature Directory

I. Restaurant POS & Digital Ordering Suite

- **Menu & Modifier Organizer**

Veg/Non-Veg categories, Halal/Vegan labeling, and EU Annex II allergens. Supports variants (sizes, portions) and custom Modifier Groups with unique pricing (e.g. toppings, extras). Includes drag-and-drop Menu Organizer.

- **Floor Plan & QR Code Engine**

Map zones (Rooftop, Bar, VIP) and tables. Auto-generate high-res QR codes. Coordinates-based Geolocation validation prevents remote ordering fraud.

- **Billing POS & Kiosk Mode**

Fast billing POS terminals with split payments, custom discounts, cash drawers, and Table Status boards. Self-Service Kiosk mode for guest-placed kiosk ordering.

- **Multiple Kitchen KOT Routing**

Automated ticket routing. Sends beverage orders to bar printers and grill items to kitchen display stations. Audit logs track items deleted after KOT creation.

- **Interactive Waiter Requests**

Digital guest buzzer for "Call Waiter" or "Request Bill". Triggers real-time audio-visual notifications on billing terminals and staff mobile apps.

II. Hotel PMS & Property Management (Hotel Module)

- **Front Desk & Guest Reservations**

Check-in/Check-out portal, room allocations, guest registration profile cards, and booking calendar views.

- **Room & Rate Plan Configuration**

Configure room types (Suite, Deluxe, Single) and assign dynamic rate plans (seasonal pricing, weekday vs weekend tariffs).

- **Folio Billing & Adjustments**

Add room charges, restaurant bills, and room service directly to the guest's Hotel Folio. Apply adjustments, room discounts, and generate unified checkout invoices.

- **Banquet, Event & Venue Booking**

Book banquets, halls, and venues for private corporate events or weddings. Manage bookings, event schedules, and event invoicing.

- **Housekeeping Operations**

Create, schedule, track, and complete housekeeping tasks. Monitor room clean/dirty statuses in real-time from the dashboard.

III. Inventory, Suppliers & Recipe Costing

- **Inventory Tracking & Unit Management**

Manage raw material stocks (e.g. flour, cheese) and track stock levels in units (kg, grams, pieces) with automated low-stock warnings.

- **Inventory Movements & Audits**

Track stock-in (purchases), stock-out (wastage, sales), and manual stock adjustment logs to control pilferage.

- **Supplier & Purchase Orders**

Manage supplier directories, negotiate purchase rates, and issue official Purchase Orders directly from the system.

- **Recipe Costing & Batch Production**

Define recipe ingredients for each dish. The system auto-deducts stock when items sell. Batch production tracking for pre-made ingredients (gravies, sauces).

IV. Cash Control, Accounting & Multi-Branch Sync

- **Cash Register Sessions**

Open/Close Cash Register logs for cashiers. Monitor starting cash, cash collections, card payments, and end-of-shift cash drawer totals.

- **Cash Denomination Reconciliation**

Force cashiers to input cash denomination counts (e.g., 500x10, 100x5) during shift closing to audit discrepancies.

- **Double-Entry Accounting & Ledger**

Integrated financial ledger, revenue entries, accounts payable, accounts receivable, and net profit balance sheets.

- **Multi-Branch Data Cloning**

Multi-branch setups. Easily copy menu structures, categories, pricing, and modifier settings from one branch to other branches with one-click syncing.

V. Integrations, Webhooks & Smart Addons

- **Android SMS Gateway & Notifications**

Use a local Android device to send transaction SMS notifications via your cellular SIM card. Saves SMS API costs. Custom Twilio/Vonage config also supported.

- **WhatsApp Order Alerts**

Direct integration to shoot order confirmation receipts and status updates directly to the customer's WhatsApp number.

- **REST API & Webhooks**

Open API keys and outgoing webhook settings to sync TableTrack order data with external accounting apps, websites, or ERP systems.

- **AI Tools & Customer Display**

Utilize AI models to auto-write descriptions, translate menus, and manage customer display queue screens displaying orders in progress.

- **Loyalty & Reward Points**

Retain clients with loyalty points programs. Award points per purchase and let customers redeem them as cash discounts during POS checkout.

3. Thermal & Bluetooth Printer Integration

TableTrack is built on native ESC/POS thermal command sets, offering broad compatibility with major receipt and kitchen printers.

Bluetooth & Thermal printing specification:

- Connection Formats: Supports both standard 80mm (3-inch POS) and portable 58mm/56mm (2-inch pocket) rolls.
- Desktop App Integration: Connecting local Bluetooth/USB printers through the Windows or macOS Desktop App Helper.
- Mobile POS Apps: Staff can connect portable Bluetooth thermal belt printers directly from the Android/iOS Waiter POS App.
- Custom Receipt Features: Print payment UPI QR codes on receipts, adjust characters per line (CPL), and trigger cash drawer pulses.
